B. Tech. in Computer Science & Engineering

**Internship Work in
Department of Computer Science Engineering**

Srushti – 25ETCS002314

**Instructor: Mr. Rakesh K R
(Ramaiah Academy)**

AUGUST– 2026

**FACULTY OF ENGINEERING AND TECHNOLOGY
M. S. RAMAIAH UNIVERSITY OF APPLIED SCIENCES
Bengaluru -560 054**

FACULTY OF ENGINEERING AND TECHNOLOGY

Certificate

*This is to certify that the Internship Work titled “**Portfolio Website**”, done at Ramaiah Academy Foundation, is a bonafide record of the work carried out by **Srushti - 25ETCS002314** in partial fulfilment of requirements for the award of **B. Tech. Degree in Computer Science and Engineer** of M. S. Ramaiah University of Applied Sciences in the Department of Computer Science Engineering.*

August– 2026

Mr. Rakesh K R
Application Engineer
Ramaiah Academy

Dr. T. N. Srikantha Dath
Director (Q & C)
Ramaiah Academy

Dr. Narendra Babu Chindanur
HOD, Department of AIML

Declaration

The internship work is submitted in partial fulfilment of academic requirements for the B. Tech. Degree of M. S. Ramaiah University of Applied Sciences in the Department of Computer Science Engineering. This internship work is a result of our own work and is in conformance to the guidelines as laid out in the University Student Handbook.

Sl. No.	Reg. No.	Student Name	Signature
1.	25ETCS002314	Srushti	

August 2026

Acknowledgements

We take this opportunity to express our sincere gratitude and appreciation to **Ramaiah University of Applied Sciences**, Bengaluru for providing us an opportunity to carry out our internship work.

It brings a sense of privilege to associate this work with **Ramaiah Academy Foundation**. Working under them has been a precious opportunity. We are immensely thankful for trainer's **Mr. Rakesh K R** for their constant encouragement, inspiring ideas and mentoring, which reflects in the final images of this work.

We are grateful to the University and thank **Dr. Narendra Babu Chindanur**, HOD of the Department of Computer Science Engineering for providing us with this opportunity, guidance, and encouragement throughout.

We would like to earnestly thank **Dr. Sarat Kumar Maharana**, the Dean, FET, for and **Dr. B S Dayananda**, Associate Dean Academics, facilitating academic excellence in the college that helped in completing this project.

We would also like to earnestly thank **Prof. Kuldeep Kumar Raina**, the Vice Chancellor, for facilitating academic excellence in the college that helped in completing this project.

We are thankful to the management of Ramaiah University of Applied Sciences for providing all the facilities and resources for the successful completion of the course.

Finally, we thank our parents, friends and all our well-wishers who have supported us in this endeavor.

The values of dedication, discipline, work ethics and patience that we have imbibed here will always remain the guiding force throughout our lives.

Abstract

Motivation: The rapid growth of the digital landscape makes a personal portfolio website essential for aspiring AI/ML engineers to showcase their projects, technical competencies, and professional identity to potential employers and peers.

Scope and Methodology: The scope of this work involves designing and developing a responsive, modern personal portfolio website. The methodology encompasses conceptualizing the layout, writing clean HTML/CSS/JavaScript (or using a modern framework), and deploying the application via GitHub Pages.

Methodology: The website was structured into key functional sections including an Introduction/Home, About Me, Skills, Projects/Experience, and a Contact form. Version control was managed using Git, and continuous deployment was implemented using GitHub Actions/Pages.

Result: A fully functional, responsive, and aesthetically pleasing portfolio web application successfully hosted online, effectively highlighting technical projects and academic achievements.

Conclusion: The internship project successfully bridged theoretical web development concepts with practical deployment, resulting in a professional online presence tailored for an AIML engineering student.

Appendices.....	(xii)

Chapter-1: Introduction

1.1 Overview:

A portfolio website serves as a digital resume and a centralized hub for an engineer's professional work. In the domain of Artificial Intelligence and Machine Learning (AIML), presenting projects visually with clean code repositories and live demos is critical.

1.2 Objectives:

To design a user-friendly and responsive user interface (UI).

To showcase academic credentials, technical skills, and practical AIML/software projects.

To deploy the website publicly using modern web hosting tools like GitHub Pages.

1.3 Report Organization:

This report details the literature review, problem statement, development methodology, results, and future scope of building the portfolio website.

Chapter-2: Literature Review

2.1 Importance of Digital Portfolios:

In modern recruitment, digital portfolios offer interactive proof of a candidate's capabilities beyond a traditional printed resume.

2.2 Technologies Explored:

HTML5 & CSS3: For structuring content and establishing a responsive, modern layout using flexbox/grid.

JavaScript: To add interactivity (e.g., mobile navigation toggles, dynamic text, smooth scrolling).

Version Control & Hosting (Git & GitHub Pages): For source code tracking, collaboration, and free, reliable static hosting.

Chapter-3: Problem Statement

3.1 Problem Definition:

Engineering students often lack a centralized, professional digital platform to exhibit their technical skills, coding projects, and internship achievements to recruiters.

3.2 Requirements:

Create a responsive design compatible with mobile, tablet, and desktop viewports.

Implement clean navigation so visitors can easily locate information about education, technical skills, and projects.

Ensure fast load times and clean accessibility standards.

Chapter-4: Problem Solving (Implementation / Methodology)

4.1 Design Phase:

Wireframing the layout into distinct sections: Landing/Hero Section, About Me, Skills Matrix, Projects Showcase, and Contact/Social Links.

4.2 Development Phase:

Structure: Writing modular HTML markup.

Styling: Applying CSS variables for consistent color palettes, typography, and responsive media queries.

Interactivity: Incorporating JavaScript event listeners for enhanced user experience.

4.3 Deployment Phase:

Pushing the source code repository to GitHub and configuring GitHub Pages to deploy the live application at <https://srushtiamareh5-spec.github.io/my-portfolio>.

Chapter-5: Results and Discussions

5.1 Deployed Website Architecture and Interface:

The finalized portfolio website was successfully published and verified at the live GitHub Pages domain (<https://srushtiamaresh5-spec.github.io/my-portfolio>). The user interface is structured into clear, functional sections that map directly to your visual implementation:

 srushtiamaresh5-spec.github.io/my-portfolio/

Hero & Navigation Section: Features a customized brand logo (<Srushti.dev>), sticky navigation links (About, Skills, Projects, Contact), and an engaging landing introduction welcoming visitors with a professional overview statement (as seen in Figure 5.1).

About Me Section: Highlights academic identity as a B.Tech AIML student, incorporating a professional photograph, a personal statement on software engineering, and quick social links to GitHub and LinkedIn (as seen in Figure 5.2).

Skills & Stack Section: Categorizes technical proficiencies into structured subsets including Acquired Skills (HTML5, CSS3, JavaScript, React), Growing Ideas (Python, Generative AI), and Development Tools (Git, GitHub, Vercel, Google AI Studio) (as seen in Figure 5.3).

Projects Showcase: Displays card-based modules for major developments such as the AI Code Reviewer & Bug Hunter and the Agriculture Platform, complete with tech-stack tags and repository indicators (as seen in Figure 5.4).

Contact Section: Delivers a clean communication gateway featuring direct email contact options and copyright indexing in the footer (as seen in Figure 5.5).

5.2 Performance and Usability Analysis:

The web application underwent comprehensive testing across mobile viewports to evaluate production standards:

Render Speed: Static asset composition via clean HTML5, modular CSS, and lightweight layouts ensures instant DOM execution and zero load-time lag.

Responsive Fluidity: Viewport evaluation confirms seamless interface adjustments across narrow mobile screens, tablet displays, and widescreen environments without layout breakage or text clipping.

Deployment Reliability: Integrating the source repository with GitHub Pages ensures automated deployment pipelines and immediate live synchronization upon pushing updates.

5.3 Discussion:

Building and deploying this personal portfolio established a practical link between academic software engineering principles and modern web development workflows. Utilizing version control alongside continuous cloud hosting provided a reliable foundation for presenting technical competencies to future recruiters.

Chapter-6: Conclusion and Future Scope

6.1 Conclusion: The development and deployment of the personal portfolio website successfully established a professional digital presence tailored for an AIML engineering student. By leveraging core web technologies—HTML5, CSS3, and JavaScript—alongside modern version control workflows, the project bridged theoretical software engineering concepts with practical front-end execution. The resulting application meets all structural requirements, offering responsive layouts, rapid render speeds, and seamless cloud hosting via GitHub Pages.

6.2 Future Scope: While the current version of the portfolio successfully exhibits academic credentials, projects, and technical proficiencies, several enhancements can be integrated in future iterations:

Interactive AIML Integration: Embedding a fine-tuned conversational AI chatbot directly into the contact or landing interface to answer visitor queries regarding technical skills and project details in real-time.

Dynamic Content Management: Integrating a lightweight headless Content Management System (CMS) or database integration to dynamically update projects and blog entries without requiring manual HTML code modifications.

Advanced Analytics: Incorporating visitor traffic analytics and performance monitoring tools to track engagement metrics and optimize user experience further.

Appendix-A: Source Code Snippets

A.1 Main React Application Structure (App.jsx / App.js):

(Paste a screenshot or formatted snippet of your core React component code here, showing how your components like Navbar, Hero, About, Skills, Projects, and Contact are imported and rendered).

A.2 Global Styling Stylesheet (index.css or App.css):

(Paste a snippet or screenshot of your main CSS code, highlighting custom variables, responsive design queries, or grid layouts).

Appendix-B: Configuration and Deployment Files

B.1 Package Configuration (package.json):

(Paste a screenshot or snippet of your package.json showing your dependencies like React, scripts for building, and your GitHub Pages homepage URL property).

B.2 Version Control & Deployment Workflow:

(Include a brief screenshot of your terminal executing deployment commands or your GitHub repository's Actions/Pages build confirmation).
